JT,

I must say, you folks at Purity Plus have been fantastic to work with and everything that we have asked for and needed, you have worked to make sure that it got it done. New coffee brewers were a surprise item to us, that you carried, which have been so extremely helpful and used extensively now during winter.

Thank you for a copy of the endorsement letter from CAT TBU facility. I read through the endorsement letter, and it says exactly the same thing as to why we chose to use Purity Plus also.

For the potential safety issues, the quality of water, the elimination of hassle dealing with the awkward water bottles, etc. Cost was a bit more per unit, but with strategic placement of the new units, coverage works out fine. We find that people simply bring in their own water containers (thermoses, old soda bottles, jugs, etc. and fill-up fewer times). Which also reduces the number of trips to the water coolers, thereby reducing the time lost to production for employees walking around.

So it was a win-win deal and everyone loves that HOT and super COLD water at the new stations. Especially now in the cold winter months, the HOT water is good for those hot chocolate packets that folks are bringing in. They love that they can get hot chocolate and warm up for work.

Purity Plus has installed units to Camp St, Mapleton, and Delavan facilities, which have had outstanding feedback and appreciation from all employees at all locations. It is easy to see the potential benefits others will achieve by adopting the new water stations vs. the old water coolers we all used in the past.

Very Respectfully,
